Analysis of trade between the developed and developing world, 1955-1977

ARTIKLER – ARTICLES – ARTICOLI 83

Manuskript afsluttet den 28. maj 1979

Manuscript completed 28 May 1979

Manoscritto terminato il 28 maggio 1979

Arbejdsløshed: svag nedgang i april måned

For første gang i mere end seks måneder er antallet af registrerede arbejdsløse i Fællesskabet faldet til lidt under 6 mio. og udgjorde ved udgangen af april 1979 5,9 mio., hvilket er en nedgang på 227 000. De arbejdsløses andel af den erhvervsaktive befolkning er hermed faldet fra 5,7% ved udgangen af marts til 5,5% ved udgangen af april.

Ligesom i foregående måned, er nedgangen i antallet af arbejdsløse i Fællesskabet i væsentlig grad sæsonbetinget. I sæsonkorrigerede tal er den kun på 0,2%, mens den i marts var på 0,6%. Hvad de enkelte lande angår er der i forhold til april 1978 registreret en nedgang i Danmark (-16,8%), Forbundsrepublikken Tyskland (-12,5%) og Det forenede Kongerige (-7,7%). Derimod er antallet af arbejdsløse i løbet af det sidste år steget i Frankrig (+21,2%), Italien (+13,1%) og Belgien (+5,3%).

Industriproduktionen — Februar 1979: udligning af tilbagegangen i januar

Industriproduktionen i Fællesskabet nåede i februar 1979 igen op på niveauet fra december 1978. Indekset for industriproduktionen i Fællesskabet steg efter sæsonkorrigeret til 115,3 med basisåret 1975 = 100, hvilket er en stigning på 2,3% i forhold til januar måned. I marts udviste produktionen en let stigning i forhold til februar. Denne skyldes stigninger hovedsagelig i Tyskland og Det forenede Kongerige, stabilisering i Frankrig og nedgang i Italien og Nederlandene.

En analyse af udviklingstendenserne på kort sigt i de seneste seks måneder viser, at væksten er regelmæssig og vedvarende i Frankrig og Nederlandene, mens den er mere usikker i Forbundsrepublikken Tyskland og i endnu højere grad i Italien.

Analysen af branchegrupperne, er det markante træk den manglende aktivitet i produktionen af investeringsgoder i næsten alle landene, især i Frankrig og Forbundsrepublikken Tyskland.

Energi: vanskelige forhold på oliemarkedet

Fællesskabets olieøkonomi i de første måneder af 1979 var domineret af to faktorer, som bevirkede en fundamental ændring af markedsforholdene. Standsningen af eksporten fra Iran i to måneder i begyndelsen af 1979 (Iran tegnede sig for ca. 16% af Fællesskabets import af råolie fra tredjelande i 1978) i forbindelse med den strenge vinter i de ni EF-lande førte uundgåeligt til kraftige prisstigninger på råolie og spotleverancerne. Lagerbeholdningerne (ud over sikkerhedslagrene) var ikke tilstrækkelige til at dæmpe markedsmekanismen. De sidste tal viser forøgede leverancer af olieprodukter på det interne marked for de tre første måneder af 1979 (især gas- og dieselolie og restbrændselolie).

Rådets beslutning om at reducere de ni landes olieforbrug med 5% i 1979 finder anvendelse på forbruget i den resterende del af året.

Samhandelen inden for Fællesskabet (*)

Samhandelen inden for Fællesskabet (udregnet på basis af importen) var i februar 1979 på ca. 15 milliarder ERE (eksklusive Det forenede Kongerige), og i årets første to måneder var der tale om en temmelig betydelig stigning af størrelsesordenen 13% i forhold til samme periode sidste år. Denne stigning var især kraftig i februar, hvor samhandelen mellem medlemsstaterne steg med 16% i forhold til den foregående måned. Italien var det land, der havde den største stigning i handelen med fællesmarkedsparterne: +30% for importens (+40% fra januar til februar i år) og +37% for eksportens vedkommende (+58% fra januar til februar). Stigningen i Frankrig (+18% for importens og +17% for eksportens vedkommende) og i Forbundsrepublikken Tyskland (+17% og +13%) var ligeledes betydelig.

Hvad angår handelsbalancen mellem medlemslandene for februar bemærker man et betydeligt overskud i Italien (+378 mio ERE), Nederlandene (+263 mio) og Belgien (+135 mio), mens underskuddet i Frankrig stadig væk er betydeligt (-111 mio).

Fællesskabets samhandel med tredjelande (*)

I begyndelsen af 1979 (de to første måneder) steg værdien af Fællesskabets import (24,5 milliarder ERE eksklusive Det forenede Kongerige) betydeligt (+13%) i forhold til samme periode året i forvejen. Især var værdien af Fællesskabets import i februar (12,3 milliarder) 16% større i forhold til samme periode i 1978 og lidt højere end for januar måned i år.

Den samme tendens gør sig gældende for Fællesskabets eksport (11,5 milliarder ERE i februar af 22,4 i de to første måneder): +11% for januar-februar 1979 i forhold til samme periode i 1978 og +5% for februar i forhold til januar i år.

Underskuddet på Fællesskabets handelsbalance lå i begyndelsen af 1979 på samme niveau som året i forvejen (-2,3 milliarder ERE).

Forbrugerpriser: forøget stigning

Forbrugerprisindekset for alle EF-landene steg med 1,1% fra marts til april 1979, hvilket tydeligt viser den forøgede stigning, der har fundet sted siden årets begyndelse.

For perioden fra januar til april har den gennemsnitlige stigning været på 1,0% for den tilsvarende periode i 1978.

Stigningerne var meget kraftige i Det forenede Kongerige (1,7%) og i Italien (1,6%) i Frankrig (1,0%) og Nederlandene (0,9%), og kraftige i Forbundsrepublikken Tyskland (0,5%) og Danmark (0,5%). I Belgien og Luxembourg registreredes igen kun svage stigninger (0,2%).

Den årlige stigning for hele EF nåede op på 8,7%, hvilket dog er mindre end stigningstakten i Det forenede Stater, som i den samme periode lå på omkring 10,4%.

(*) **Bemærk:** Af tekniske årsager har man endnu ikke kunnet udarbejde tallene for Det forenede Kongeriges udenrigshandel for februar måned, og de har derfor heller ikke kunnet fremsendes til EUROSTAT. Ovenstående korte kommentar er udarbejdet på grundlag af oplysningerne for de andre medlemslande.

Unemployment: slight drop in April

For the first time for over six months, the number of registered unemployed in the Community fell to just under 6 million, standing at 5.9 million at the end of April 1979 — a drop of 227 000. The number of unemployed as a proportion of the civilian working population fell again from 5.7% at the end of March to 5.5% at the end of April.

As in the previous month, the size of this decrease is largely due to seasonal factors. The drop in the seasonally adjusted figures is only 0.2%, as against 0.6% in March. As for the individual countries, compared with April 1978, a drop was recorded in Denmark (–16.8%), the Federal Republic of Germany (–12.5%) and the United Kingdom (–7.7%); on the other hand, the number of unemployed has increased over the past year in France (+21.2%), Italy (+13.1%) and Belgium (+5.3%).

Index of industrial production — February 1979: recovery of the ground lost in January

In February 1979 industrial production in the Community went up again to the December 1978 level; after adjustment for seasonal variations, the index of industrial production in the Community went up to 115.3 (base 1975=100), an increase of 2.3% compared with January. In March, production was slightly up on February: this rise is the result of increases principally in Germany and the United Kingdom, a stabilization in France and decreases in Italy and the Netherlands.

Analysis of short-term trends over the last six months shows that the rate of growth is steady and lasting in France and the Netherlands but more faltering in Germany and, to an even greater degree, Italy.

The salient feature of the analysis by sector is still the stagnation in the production of capital goods in almost all the countries and especially in Germany and France.

Energy: difficult situation on the oil market

The oil market in the Community during the first few months of 1979 was dominated by two factors which caused a profound change in the market conditions. The stopping of exports from Iran for two months at the beginning of the year (Iran accounted for approximately 16% of Community imports of crude oil from third countries in 1978) combined with the harsh winter suffered by the nine countries of the Community resulted inevitably in sharp increases in prices for crude oil and spot deliveries. The levels of stocks (apart from strategic stocks) were not adequate to cushion the effects of the market forces. The latest statistics show increased deliveries of petroleum products on the domestic market during the first three months of 1979 (especially gas-diesel oil and residual fuel-oil).

The Council's decision to reduce the Nine's oil consumption by 5% in 1979 will have to be implemented over the remainder of the year.

Intra-community trade (*)

In February 1979 trade between the Member States (based on imports) amounted to approximately 15 thousand million EUA (excluding the United Kingdom), thus showing a fairly substantial increase of around 13% during the first two months of this year in comparison with the same period of 1978. This growth was particularly marked in February when intra-Community trade went up by 16% over the previous month. Italy showed the most substantial increase in its trade with its Common Market partners: purchases up by 30% (and +40% between January and February this year) and sales by 37% (+58% between January and February). The increases for France (+18% for purchases and +17% for sales) and Germany (+17% and +13% respectively) were also substantial. The February balance of trade between the Member States shows a hefty surplus for Italy (+378 million EUA), the Netherlands (+263 million EUA) and Belgium (+135 million EUA), while France still has an appreciable deficit (–111 million EUA).

Community external trade (*)

At the beginning of 1979 (first two months) the value of the European Community's imports (24.5 thousand million EUA, not including the United Kingdom) showed a significant increase (+13%) compared with the same period of the previous year. In particular, the value of Community purchases in February (12.3 thousand million EUA) was 16% up on the same period of 1978 and slightly higher than in January this year.

The trend is the same for Community exports (11.5 thousand million EUA in February and 22.4 thousand million EUA during the first two months of the year): +11% in January-February 1979 compared with the same period of 1978 and +5% in February compared with January this year.

At the beginning of 1979 the Community's trade balance stood at the same deficit level as in 1978 (–2.3 thousand million EUA).

Prices: even sharper rise

The consumer price index for the EC as a whole went up by 1.1% between March and April 1979, making the sharp rate of increase discernible since the beginning of the year even more pronounced.

For the period from January to April the average increase was 1.0%, as against 0.7% for the corresponding period of 1978.

The rises were very high in the United Kingdom (1.7%) and Italy (1.6%) high in France (1.0%) and the Netherlands (0.9%), but more moderate in Germany (0.5%) and Denmark (0.5%). Slight rises (0.2% in both cases) were again recorded for Belgium and Luxembourg.

The rise over 12 months for the EC as a whole amounted to 8.7%, which is still lower than the rate for the United States over the same period (10.4%).

(*) **NB** : for technical reasons, it has not yet been possible to compile the United Kingdom's external trade statistics for February and forward them to the SOEC. The brief notes above are based on the data for the other Member States.

Disoccupazione: leggera flessione in aprile

Per la prima volta, dopo oltre sei mesi, il numero dei disoccupati iscritti è sceso, anche se di poco, sotto i 6 milioni. Infatti, con una diminuzione di 227 000 persone, il numero dei disoccupati si situa a fine aprile 1979 a circa 5,9 milioni.

La parte dei disoccupati nella popolazione attiva civile è passata così dal 5,7 al 5,5% in un mese.

Come per il mese precedente, la riduzione del numero dei disoccupati nella Comunità è un fenomeno di natura prettamente stagionale. In dati corretti essa risulta appena dello 0,2%, a fronte dello 0,6% in marzo. A livello nazionale, rispetto ad aprile 1978, si registra una diminuzione per la Danimarca (-16,8%), la R.F. di Germania (-12,5%) ed il Regno Unito (-7,7%); il numero dei disoccupati è aumentato invece in Francia (+21,2%), in Italia (+13,1%) e in Belgio (+5,3%).

Indice della produzione industriale — Febbraio 1979: Ricupero della flessione verificatasi in gennaio.

La produzione industriale della Comunità ritrova, nel febbraio 1979, il livello del mese di dicembre 1978; l'indice della produzione industriale della Comunità risale, dopo la correzione delle variazioni stagionali, al livello 115,3 sulla base 1975=100, con un aumento del 2,3% rispetto, a gennaio. Nel mese di marzo la produzione è leggermente superiore rispetto a febbraio: tale incremento deriva dagli aumenti verificatisi soprattutto in Germania e nel Regno Unito, da una stabilizzazione in Francia, e da flessioni in Italia e nei Paesi Bassi. L'analisi della tendenza a breve termine degli ultimi sei mesi mostra che l'aumento è regolare e costante in Francia e nei Paesi Bassi; più incerto in Germania e, a un livello maggiore, in Italia.

Nell'analisi per gruppo di settori, il fatto rilevante resta la mancanza di dinamismo della produzione di beni d'investimento in quasi tutti i paesi, e più segnatamente nella R.F. di Germania ed in Francia.

Energia: Situazione difficile nel mercato petrolifero

L'economia petrolifera della Comunità durante i primi mesi del 1979 è stata caratterizzata da due fattori che hanno determinato un profondo cambiamento nelle condizioni del mercato. Il blocco delle esportazioni iraniane durato due mesi all'inizio del 1979 (l'Iran rappresentava nel 1978 circa il 16% delle importazioni comunitarie di petrolio greggio proveniente da paesi terzi), associato ad un inverno rigido nei nove paesi della Comunità, ha avuto come inevitabile conseguenza un'impennata dei prezzi tanto per il petrolio greggio e che per le consegne "spot". I livelli delle scorte (escluse quelle di sicurezza) non erano sufficienti a frenare i meccanismi del mercato. Le ultime statistiche mettono in evidenza un aumento delle consegne di prodotti petroliferi sul mercato interno per i primi tre mesi del 1979 (in particolare gasolio da autotrazione e da riscaldamento).

La decisione del Consiglio di ridurre del 5% il consumo petrolifero dei Nove nel 1979 dovrà essere attuata sui consumi del resto dell'anno.

Commercio intracomunitario (*)

Il volume degli scambi all'interno della Comunità (base importazioni) è stato, nel mese di febbraio 1979, di circa 15 mrd di UCE (escluso il Regno Unito) e ha fatto registrare durante i primi due mesi di quest'anno un notevole incremento, dell'ordine del 13%; rispetto allo stesso periodo dello scorso anno. Tale incremento si è accentuato soprattutto in febbraio, quando gli scambi intracomunitari hanno fatto registrare un aumento del 16% rispetto al mese precedente. L'Italia è il paese in cui l'incremento del commercio con i partners del Mercato Comune è stato il più notevole: +30% degli acquisti (+40% tra gennaio e febbraio di quest'anno) e +37% delle vendite (+58% tra gennaio e febbraio). Non meno importante è stato l'incremento dagli scambi francesi (+18% per gli acquisti e +17% per le vendite) e tedeschi (rispettivamente +17% e +13%).

Per quanto attiene alla bilancia commerciale del mese di febbraio tra i Paesi membri, va notato un notevole eccedente per l'Italia (+378 milioni di UCE), per i Paesi Bassi (+263 milioni di UCE) e per il Belgio (+135 milioni di UCE), mentre permane sensibile il deficit francese (-111 milioni di UCE).

Commercio estero della Comunità (*)

Il valore delle importazioni della Comunità europea (24,5 miliardi di UCE escluso il Regno Unito) ha fatto registrare all'inizio del 1979 (i primi due mesi), un significativo aumento (+13%) rispetto allo stesso periodo dell'anno precedente. In particolare, il valore degli acquisti comunitari in febbraio (12,3 miliardi) ha superato del 16% quello del corrispondente periodo 1978, e di poco il livello raggiunto nel mese gennaio di quest'anno.

Analoga tendenza si è avuta per le esportazioni (11,5 miliardi di UCE in febbraio, e 22,4 nei primi due mesi): +11% di gennaio febbraio 1979 rispetto allo stesso periodo del 1978, e più 5% di febbraio rispetto a gennaio di quest'anno.

La bilancia commerciale della Comunità si situa, all'inizio del 1979, allo stesso livello di deficit dell'anno precedente (-2,3 miliardi UCE).

Prezzi: Accelerazione dell'aumento

L'indice dei prezzi al consumo per la totalità dei Paesi della CE è aumentato dell'1,1% da marzo ad aprile 1979, e conferma l'accelerazione delineatasi sin dall'inizio dell'anno.

Per il periodo da gennaio ad aprile l'aumento medio è stato dell'1,0%, rispetto allo 0,7% del corrispondente periodo 1978.

Gli aumenti sono stati particolarmente forti nel Regno Unito (1,7%) e in Italia (1,6%); forti in Francia (1%) e nei Paesi Bassi (0,9%), più moderati invece nella R.F. di Germania (0,5%) e in Danimarca (0,5%). Il Belgio e il Lussemburgo hanno fatto registrare ancora una volta degli aumenti piuttosto scarsi (0,2%).

L'aumento sull'arco di 12 mesi per tutta la Comunità europea ha raggiunto l'8,7%; un aumento comunque inferiore al tasso degli Stati Uniti per lo stesso periodo (10,4%).

(*) Nota : Per ragioni tecniche, le statistiche del commercio estero del Regno Unito relative al mese di febbraio non hanno potuto essere elaborate e comunicate all'ISCE. I dati di cui sopra sono desunti dalle informazioni relative agli altri Stati membri.

Denne publikation omfatter to dele: den ene indeholder »fællesskabstabeller« og den anden »tabeller efter lande«.

I »fællesskabstabellerne« er samlet de vigtigste indikatorer for Fællesskabets og for hver medlemsstats økonomiske udvikling på kort sigt, uddybet med nogle strukturelle oplysninger for året 1975. Denne del, som skal muliggøre sammenligninger mellem landene, indeholder der for kun af EUROSTAT harmoniserede tal, på grundlag af fælles kriterier, hvilket forklarer visse uoverensstemmelser med de nationale tal.

Rækkerne er korrigerede for sæsonvariationer ved hjælp af EUROSTAT's »Dainties«-metode. **De mest aktuelle tal er foreløbige og i visse tilfælde direkte skønnede af EUROSTAT.**

Som indikator for verdenskonjunkturudviklingen indeholder »fællesskabstabellerne« en søjle for USA.

I »tabellerne efter lande« er for hvert land udvalgt de for det pågældende land mest anvendte konjunkturrelle indikatorer; det drejer sig om nationale rækker, i overensstemmelse med nationale kriterier og sæsonkorrigerede efter nationale metoder. I denne del er der ud

over Fællesskabets ni medlemslande medtaget kandidatlandene Spanien, Grækenland og Portugal, såvel som USA og Japan.

For alle rækkerne findes de historiske tal (årlege, kvartals- og månedstal) i EUROSTAT's databank CRONOS. Almindeligvis går tallene tilbage til 1960, og kan oplyses på anmodning.

Denne publikation indeholder kun et yderst minimalt antal metodologiske bemærkninger. Oplysninger om definitioner, metoder, fællesskabstilpasninger og kilder for hver enkelt række vil blive givet i en specialudgave af »EUROSTATISTIK«, hvori de statistiske angivelser definitioner, metoder, tilpasninger og kilder vil blive beskrevet.

Der udkommer to udgaver af »EUROSTATISTIK« hver måned. Den ene affattet på dansk, engelsk og italiensk leveres til trykning den fjerde tirsdag hver måned, og vil kunne fås i hovedstæderne den følgende mandag. Den anden affattet på tysk, fransk og nederlandsk leveres til trykning den anden tirsdag hver måned, og vil kunne fås i hovedstæderne den følgende mandag. Hver udgave indeholder de mest aktuelle tal til disposition den dag leveringen til trykning finder sted.

PREFACE

EN

This bulletin is in two parts : 'Community Tables' and 'Country Tables'.

The Community Tables contain the main indicators useful for following short-term economic developments in the Community as a whole and in the Member States, supplemented by a certain amount of structural data relating to 1975. This part of the bulletin is intended to make possible real comparisons between countries and therefore only contains data which has been harmonized by EUROSTAT on the basis of common criteria, this explains many of the differences from national series.

Seasonal adjustment of the series has been done with EUROSTAT's own method, 'Dainties'. **The most recent data are provisional and in some cases estimated by EUROSTAT.**

Finally the Community Tables include a column for the USA as an indicator of changes in the world economy.

The Country Tables contain a selection of the economic indicators most often used in each country. They are national series based on

the definitions of the country concerned and seasonally adjusted by the country. In addition to the nine Community countries this section includes the three candidate countries (Spain, Greece and Portugal) the USA and Japan.

For all series, historical data (annual, quarterly or monthly) is available in EUROSTAT's CRONOS data bank, going back in most cases to 1960. This can be supplied on request.

This publication contains the absolute minimum of methodological notes. Details of definitions, methods, Community adjustments and sources of each series will be given in a special edition of 'Eurostatistics'.

Two versions of 'EUROSTATISTICS' come out every month. The first in Danish, English and Italian goes to the printers the fourth Tuesday of the month and will be distributed in the national capitals the following Monday. The second in German, French and Dutch goes to the printers the second Tuesday of the month and will be distributed in the national capitals the following Monday. Each version will contain the latest figures available when it went to press.

AVVERTENZA

IT

Il presente bollettino consta di 2 parti : l'una ha per oggetto alcune « tavole comunitarie », l'altra riguarda alcune « tavole per paese ».

Nelle tavole « comunitarie » si trovano riuniti i principali indicatori che consentono di seguire l'evoluzione di breve periodo dell'economia comunitaria nel suo complesso e in ogni singolo Stato membro, completati da alcuni dati strutturali relativi al 1975. Questa parte, che si prefigge di consentire di stabilire confronti reali fra paesi, contiene soltanto dati armonizzati dall'EUROSTAT in base a criteri comuni, il che spiega l'esistenza di certe differenze rispetto ai dati nazionali.

Le variazioni stagionali delle serie sono eliminate con il metodo « Dainties » dell'EUROSTAT. **I dati più recenti sono provvisori e, a volte direttamente stimati da EUROSTAT.**

Nelle tavole comunitarie figura una colonna relativa agli Stati Uniti d'America a titolo di indicatore dell'evoluzione della congiuntura mondiale.

Nelle « tavole per paesi » si riporta una selezione degli indicatori congiunturali più correntemente adoperati in ogni paese; si tratta di serie nazionali, corrispondenti ai criteri nazionali e « destagionaliz-

zate » per mezzo dei metodi nazionali. In questa parte sono presi in considerazione oltre ai 9 paesi membri della Comunità, i paesi candidati all'adesione: Grecia, Portogallo, Spagna, nonché gli Stati Uniti d'America e il Giappone.

Per tutte le serie, presso il sistema CRONOS dell'EUROSTAT sono disponibili dati storici (annui, trimestrali o mensili) risalenti in generale al 1960, i quali possono essere forniti su richiesta.

La presente pubblicazione contiene soltanto annotazioni metodologiche ridotte allo stretto minimo. Le informazioni relative alle definizioni, ai metodi, agli aggiornamenti comunitari e alle fonti di ogni serie saranno riportate in un fascicolo speciale (ad hoc) di EUROSTATISTICHE avente per oggetto le definizioni, i metodi, gli aggiornamenti e le fonti dei dati statistici.

Ogni mese vengono pubblicate due versioni di « EUROSTATISTICHE ». La prima redatta in danese, inglese e italiano, che va in stampa il 4° martedì di ogni mese, sarà diffusa nelle capitali il lunedì successivo; la seconda redatta in tedesco, francese e olandese, che va in stampa il 2° martedì di ogni mese, sarà diffusa nelle capitali il lunedì successivo. Ogni versione riporta le ultime cifre disponibili il giorno della stampa

ARTICOLO

83

DI RECENTE PUBBLICAZIONE

91

- (1) Alcuni dati più dettagliati per branca sono riportati nel bollettino « Indicatori congiunturali dell'industria ».
- (2) I dati contenuti in questa parte del bollettino rappresentano i risultati dell'indagine sulla congiuntura presso i capi di impresa delle Comunità. Alcuni dati più particolari figurano in « Economia europea ».
- (3) Alcuni dati del commercio estero più dettagliati ed espressi in UCE sono riportati nel « Bollettino mensile del commercio estero ».

DE

Die deutsche Fassung dieses Bulletins wird am zweiten Dienstag jeden Monats in Druck gegeben.

FR

La version française de ce bulletin est mise sous presse le second mardi de chaque mois.

NL

De Nederlandse versie van dit bulletin gaat de tweede dinsdag van elke maand ter perse.

* **Produktionsforventninger:** Saldo for positive svar (forbedring af situationen) og negative svar (forværring af situationen).
Færdigvarelagre: Saldo for positive svar (større end normalt) og negative svar (lavere end normalt).
Ordrebeholdning: Saldo for positive svar (forbedring af situationen) og negative svar (forværring af situationen).

* **Production expectations:** Balance between positive replies (improvement in the situation) and negative replies (worsening of the situation).
Stocks of finished products: Balance between positive replies (above normal) and negative replies (below normal).
Order books: Balance between positive replies (improvement in the situation) and negative replies (worsening of the situation).

* **Prospettive di produzione:** Saldo fra le risposte positive (miglioramento della situazione) e le risposte negative (deterioramento della situazione).
Giacenze di prodotti finiti: Saldo fra le risposte positive (superiori al normale) e le risposte negative (inferiori al normale).
Ordinative industriali: Saldo fra le risposte positive (miglioramento della situazione) e le risposte negative (deterioramento della situazione).

ANALYSIS OF TRADE BETWEEN THE DEVELOPED
AND DEVELOPING WORLD, 1955-1977

1. INTRODUCTION

The aim of this brief analysis is to attempt to give a factual basis to what has become an emotional subject in recent years — the level of trade between the developed and developing world, and the degree of penetration each has achieved in the other's market.

Trade is considered by subdividing commerce into traditional groupings — the industrialized countries, the non-OPEC developing countries, the OPEC group and the State-trading countries, as defined by the United Nations Standard Country Codes.¹ However, in this analysis, the magnitude of total trade and trade of the industrialized countries will be lower than that published by the United Nations since trade between the Member States of the European Community (intra-Community trade) is excluded.

The analysis commences with the construction of a matrix of international trade with the aim of facilitating inter-temporal and inter-spatial comparisons in performance. A similar matrix construction is used to analyse the components of the world trade-balance.

The study continues by subdividing the industrial countries into four elements² — the European Community, the United States, Japan and Other OECD countries. Their trade with developing countries is then analysed by geographical region (Africa, America, Middle East, Far East and Oceania).

After examination of the overall trading patterns, trade in individual product groups is analysed, with particular attention being given to the degree of penetration achieved by each industrialized country in their trade with the developing world. Finally, to complete the picture, trade between the developing countries themselves is briefly considered.

2. WORLD TRADE 1955-1977

From the total-trade matrix shown above, it is possible to observe the changes which have taken place in the direction of world trade over a relatively long period in terms of conventional trade analysis. In each year, total world trade has been equated to 100, and all other flows have been expressed as a proportion of this figure³. Thus, it can be seen that in 1955, the industrialized countries accounted for 60% of total world exports, with their exports to other industrialized countries accounting for 38% of the total. The balance is made up of 16% to non-OPEC developing countries, 3% to OPEC and 2% to the State-trading countries. Between 1955 and 1977, considerable changes occurred in this distribution with the overall share of the industrialized countries increasing to 66% of total trade by 1970, but then, after the oil-crisis, falling back to 58% in 1977. Changes

can similarly be observed in their trade with the individual groups, with a noteworthy development being the increase in importance within world trade of exports from industrialized countries to OPEC — rising from 3% in 1955 to 7% in 1977.

The world-trade matrix can also be used to examine trade flows in the opposite direction (i.e. imports). For example, taking the first row of Table I, it can be seen that in 1955, 61% of world imports were purchased by the industrialized countries, while the non-OPEC developing countries imported 23%, and the State-trading countries 11%, of the total. By 1977 the share of the industrialized countries had fallen slightly, to 60%, while that of the non-OPEC developing countries had fallen more severely to 19%; this contrasts with a rise in the share of OPEC from 4 to 9%. The share of the State-trading countries stayed fairly constant over the period, apart from a temporary rise in 1963.

¹ The main source of data for this article is the data bank of GATT, to whom EUROSTAT is most grateful.
² This aggregate differs from the UN definition of industrialized countries used in world-trade matrix above by excluding South Africa, Israel, Yugoslavia, Gibraltar, Malta and Faroe Islands but by including Turkey.

³ It should thus be noted that the percentage figures represent only shares within a year and not growth rates between years.

The most noteworthy features of Table 1 are as follows:

- (a) For the industrialized countries:
 - (i) Intra-industrial country trade increased its share of world exports up to 1970 but then fell back in the subsequent year of the period.
 - (ii) Share of exports to non-OPEC developing countries fell throughout the period.
 - (iii) Share of exports to OPEC increased, particularly after 1973.
- (b) For the non-OPEC developing countries:
 - (i) A sharp fall in their share of world exports between 1955 and 1970, thereafter remaining stable. The fall was evident in trade with both of their major partners, namely: the industrialized countries and other non-OPEC developing countries.
 - (ii) No noticeable increase in purchasing power as a result of the rise in raw material prices in the seventies.
- (c) For the OPEC countries:
 - (i) A stable share of world exports up to 1970 followed by a slight rise up to 1973 and a much sharper increase for the next five years.
 - (ii) By 1977, their exports to developed countries were in excess of those from all other developing countries.
 - (iii) Exports to non-OPEC developing countries exceeded, by 1977 the internal trade of this group.
- (d) For the State-trading countries:

- (i) Share of world trade remained relatively static over the period, except for a slight rise in 1963.
- (ii) The majority of trade is conducted within the Communist bloc.

A third way in which the matrix of international trade (Table 1) may be employed is to determine whether trade between any two groups is in surplus or deficit.

Since the original value data for the matrix is calculated on an fob basis, by definition world exports are equal to world imports, and this is the value which has been equated to 100. Consequently, in each year, both the "import" and "export" proportions are calculated from the same value base. The difference between these percentages, therefore, will give an indication of the balance between any two trade flows.

Thus, in 1977, OPEC exports to the industrialized countries accounted for 12% of world trade (row 4) whilst their imports from the same group amounted to only 7% of the total (column 4). This means that in 1977, the OPEC group had a surplus with the industrialized countries equal to 5% of the total value of world trade in that year. This amounts to 42 000 millions USD, and this figure can be seen in the appropriate position in Table 2, which shows the trade balances between the different groups over the period.

Table 2 — Matrix of balance of trade by country groupings, 1955-1977

(thousand million USD; fob)

	1973	0	- 3	3	0	-
	1977	1	- 6	5	1	-

Sources: Yearbook of International Trade Statistics, United Nations. Matrices of World Trade, GATT.

The most striking figure in Table 2 is the 63 000 million USD, surplus for OPEC in 1977. This is equivalent to 7% of total world trade in that year and, in real terms, represents a twelve-fold increase over 1955.

- (i) 42 000 million USD of this surplus was with the industrialized countries whose overall deficit was moderated by their surpluses with non-OPEC developing countries and State-trading countries.
- (ii) The rest of the OPEC surplus was with the non-OPEC developing countries who also had large deficits with each of the other trading blocs.
- (iii) The overall non-OPEC developing country deficit of 40 000 million USD represented nearly 30% of their total export earnings. Surprisingly, this does not amount to a worsening of the pre-oil-crisis situation for these countries, and is considerably better than the peak of 47% recorded in 1975.

3. WORLD TRADE BY MAIN PRODUCT CATEGORIES

When total trade is divided into trade in manufactured and in primary products, differences between the two divisions become evident, particularly the share occupied by each in total world trade over the period.

Table 3 — Relative shares of manufactured and primary products in world trade (%)

Products	1955	1963	1970	1973	1977
Primary	57	50	42	42	46
Manufactured ¹	43	50	58	58	54

¹ SITC Sections 5 to 8 less 68.

The declining importance of primary products in total world trade in the previous two decades is clear from Table 3. This structural change occurred because the expansion in world trade over the fifteen years up to 1970 was concentrated in manufactured products which quadrupled in value while primary products only doubled. This expansion in manufactures was most evident in trade between the industrialized countries themselves which expanded five-fold in value to account for 54% of world trade in manufactures in 1970.

A reversal in the declining share of primary products was seen between 1973 and 1977, this being due to the predominance of oil. However, if fuel exports are excluded from the equation trade in manufactures continued to take an increasing share of world trade. It is also interesting to note that the effects of the recession in trade between the western countries was ameliorated to some extent by the ability of these countries to increase their exports of manufactures to both the OPEC group and the State-trading countries.

Table 4 gives a more detailed breakdown of the origins of primary product exports.

A surprising feature of this table is that, after OPEC, the next most important group of primary product suppliers is the industrialized countries who furnished 42% of the total in 1955, this having fallen

Table 4 — Distribution of world primary product exports (%)

Exporter Group	1955	1963	1970	1973	1977
Non-OPEC Developing	48	45	28	24	21
OPEC			17	22	37
Industrialized	42	43	44	43	31
State-trading	11	12	11	11	10

to 31% by 1977 due to the growth in importance of OPEC. The main market for these products, more so than for total trade, was the other industrialized countries.

Table 5 – Distribution of world manufactured product exports
(%)

Exporter Group	1955	1963	1970	1973	1977
Non-OPEC developing	5	5	6	8	9
OPEC			0	0	0
Industrialized	83	78	81	79	79
State-trading	12	17	13	12	11

The origins of manufactured product exports are shown in Table 5. The aforementioned dominance of the industrialized countries in this trade is obvious from the above table. The growth in the share of the State-trading countries between 1955 and 1963 was due more to the relative decline in the performance of the industrialized countries over the period than to a real improvement in their own market penetration.

Despite the fact that the share of the developing countries increased during the 1970s, by 1977 it was still below that of the State-trading countries.

4. TRADE OF THE INDUSTRIALIZED COUNTRIES WITH THE DEVELOPING COUNTRIES

In Table 6, the industrialized countries have been subdivided into four elements: European Community (EUR 9), the USA, Japan and other OECD members. For these subdivisions, the value of trade with the non-OPEC developing countries and the OPEC group is given in order to demonstrate how the pattern of trade has differed between the groups. It should be noted that in this, and later tables, imports are valued on a cif basis.

The most interesting features in this table are:

(a) For the non-OPEC developing countries:

(i) The development of trade with Japan for which there was a twelve-fold increase in imports resulting in an escalation in Japan's surplus with this group from 600 million USD in 1963 to 10 000 million USD by 1977.

(ii) A moderate surplus for the USA up to 1973 which was transformed into a 5 000 million USD deficit by 1977.

(iii) The consistent, though small, deficit of the Community which throughout the period was the most important trading partner.

(b) For the OPEC countries:

(i) A plethora of deficits for the industrialized countries, even in the period before the oil crisis.

(ii) The seven-fold increase in US imports from the group, being offset only modestly by an almost four-fold increase in exports between 1973 and 1977, leading to the biggest (19 000 million USD), deficit amongst the industrialized countries in 1977.

(iii) The relative success of the Community in containing the growth in its deficit by managing to increase its exports faster than its imports in the post-crisis period.

(iv) The rate of growth of Japan's exports was the same as that of the Community while that for imports was greater. This meant that by 1977 Japan's deficit approached that of the Community even though the value of their trade was considerably lower.

5. INDUSTRIALIZED COUNTRY IMPORTS FROM THE DEVELOPING COUNTRIES

The distribution of industrialized country imports is explored in more detail in Table 7. Here, as well as subdividing the industrialized countries into their constituent parts, the developing countries, too, are split into geographical regions.

The first part of the table gives the value of industrialized country imports from the world and from the Class 2 (developing) countries, while the second section shows the geographical distribution of imports originating from the Class 2 countries. Thus, in 1977, the Community's total imports were 194 400 million USD of which 85 900 million USD (44.0%) came from the Class 2 countries. This was made up of 26% from Africa, 15% from developing America

(including the Caribbean), 44% from the Middle East, 15% from the Far East and 1% from Oceania.

The aim of the third section of the table is to show the share of each grouping in total industrialized country trade with the Class 2 regions. For example, in 1963 the Community accounted for 54% of all imports from Class 2 countries; the USA, 25%; Japan, 10% and Other OECD, 12%. By 1977 this distribution had changed with the Community decreasing its purchases to 39% of the total, the USA increasing to 31%, Japan also increasing to 18% and Other OECD remaining constant. However, a glance at the Class 2 regions shows that these changes were by no means uniformly distributed over the developing world. For example, United States imports from Africa grew at well above its Class 2 average (from 9% to 36% of industrialized country imports) whereas those from America grew only slightly (from 42% to 49%).

Table 8 has a similar structure to Table 7, but is presented in an abbreviated version and concentrates on the total primary product imports of the industrialized countries.

The following aspects are noteworthy:

- (i) as in the case of total imports, the Community is the largest importer of primary products;
- (ii) Japan was the next largest importer in 1973, but was displaced by 1977 by the USA;
- (iii) the proportion of USA primary product imports supplied by developing countries leapt from one half in 1973 to nearly three quarters in 1977.

Thus in 1977 the USA took nearly a quarter of primary product

imports compared with only 18% in 1973. The increase in purchases was centred on Nigeria and the Middle East (mainly oil) which represented a shift from traditional suppliers in developing America. This change in the pattern of US purchases is challenging the Community's position as the major market for African exports.

Table 9 employs a similar structure to cover imports of manufactured products from the developing countries. Up to 1973 industrialized country imports of manufactured goods grew faster than imports of primary products, but could not compete with the jump in oil imports in the mid-1970s. The highlights of the above table are:

- (i) the expansion of US imports to overtake those of the Community between 1963 and 1970;

Source: GATT.

- (ii) the even faster growth in Japanese imports from this source up to 1970, although from a much lower base;

- (iii) developing countries accounted for over 20% of US and Japanese imports in 1977, although by then Japanese imports had stagnated at their 1973 level;

- (IV) Other OECD countries were by far the largest importers of manufactured goods in total, but only a minute proportion of these were supplied by the developing world.

As might be expected, the Far East remains the major supplier amongst the developing countries and, in fact, has strengthened its dominant position throughout the period under review. So much so that in 1977 it supplied 88% of Japanese imports, 75% of other OECD countries, 71% of USA and 64% Community purchases.

Given that the growth in imports of manufactures has outstripped that in primary products, rising from 8% of the total in 1963 to 16% in 1977, it is worth examining the major components of this trade.

These four product groups account for nearly 60% of manufactured product imports and were notable for the following reasons:

- (i) the very fast growth in electrical machinery, from virtually no trade in 1963 to become second only to clothing by 1977;
- (ii) clothing replaced textiles as the main import by 1970 and, together with shoes and leather, accounted for nearly a third of the total in 1977;

- (iii) in the 1970s the developing countries supplied over half of the industrialized countries' imports of clothing and nearly half of their imports of shoes and leather.

Taking each product in turn, one finds:

- (a) For clothing:

- (i) The developing countries supplied as much as 80% of US imports in 1977.

- (ii) The USA and the Community were the two main markets, with about equal shares, while Japan's imports were frozen at around the 1973 level.

- (b) For electrical machinery:

- (i) The other OECD countries were the major importers of this product, but took only a minute fraction from the developing world;

- (ii) The USA were by far the major market for the developing countries taking as much as three-quarters of the total, mostly from the Far East, but also from developing America.

- (c) For textiles:

- (i) This product was more important to the other OECD countries than clothing, in terms of total imports, and this group was also the major market at the world level. However, only around 10% of imports came from the developing world.

- (ii) The Community's increased share of total imports in the 1970s came particularly from the developing countries (mainly developing

America) and meant that the Community accounted for half of industrialized country imports from this source in 1977.

(d) For shoes and leather:

(i) The USA took over from the Community as the major market for

the developing countries, purchasing over half its requirements from them.

(ii) The Far East supplied almost all Japanese imports and a large proportion of the rest of the developed countries. However, developing America was also a significant supplier to this latter group.

6. INDUSTRIALIZED COUNTRY EXPORTS TO THE DEVELOPING COUNTRIES

Exports from the industrialized countries to the developing world are, of course, concentrated in manufactured products, with the three most important product groups being shown above.

The most salient features of this trade are:

(a) For all manufactures:

(i) Up to 1973, Japan increased its share of the market at the expense of the Community and the United States.

(ii) In the post oil crisis period the Community recouped some of its market share at the expense of the United States, while Japan's share remained relatively static.

(iii) the developing country market was more important to Japan than it was to the other countries although in all cases its importance increased in the mid-1970s.

(b) For non-electrical machinery:

(i) The Community supplied nearly half of total industrialized country exports to the developing countries in 1977.

(ii) In the same year, over half of Japanese exports were directed to Class 2 countries.

(c) For electrical machinery:

(i) The Community's dominance of the market has been eroded by the expansion in Japanese exports, while the share of the USA has been static.

(d) For road motor vehicles:

(i) Japan has quadrupled its developing country market share from 7 to 29%, replacing the United States as the second largest supplier after the Community.

It should be noted that for some industrialized countries, products other than those considered above hold more importance in their trade with developing countries. The United States exported 4 000

million USD worth of chemicals in 1977 and Japan exported 5 000 million USD worth of both other transport equipment and iron and steel in the same year.

It is also interesting to consider the geographical distribution of these exports of manufactured products. Up to 1973, there was an underlying stability in this distribution which was markedly disturbed by the oil crisis in that year. Previously, a traditional trading pattern was maintained with over half of the USA's exports going to developing America and of Japan's to the Far East. The Community's exports were more diversified with one third destined for Africa, one quarter for developing America and the rest for Asia.

With OPEC's increased purchasing power from 1974 onwards, one sees a shift towards the Middle East and away from developing America and the Far East. OPEC became the market for half the Community's exports and around a third of those of the other industrialized countries in 1977.

7. TRADE BETWEEN THE DEVELOPING COUNTRIES

The foregoing analysis concentrates on the 20% of world trade conducted between the industrialized and the developing countries. Here, attention is centred on the 7% of world trade which is represented by the commerce between the developing countries themselves. Although this is only a small proportion of the total, the potential for future growth is very real and thus merits further consideration.

OPEC countries have, of course, picked up an increased share of this trade over the period — rising from 23% in 1955 to 36% by 1970

and on to 60% by 1977. But, so as to present the remaining trade more clearly, the trade in fuel has been removed from Table 12:

The dominance of intra-regional trade is particularly striking and has hardly changed over the period. The Far East accounts for over half of all exports, increasing its sales to the Middle East at the expense of trade within the Far East. Trade between the countries of developing America is, not surprisingly, fairly important, with few exports away from the region.

Trade within Africa and the Middle East is relatively minor at 5 to 7% of the total — around 1 500 million USD in 1976. In that year, both regions were more dependent on the Far East as a supplier than they were on other countries within their region.

As mentioned above, fuel was by far the most important constituent of the total trade between developing countries by the mid-1970s. In 1976, other primary products and manufactures each accounted for half of the remaining trade, an increase in importance for manufactures since the early 1970s. This was equally true of intra-regional trade, except for that of Africa, where manufactures only accounted for a quarter of non-fuel commerce. For both Africa and developing America, primary products accounted for over half of their non-fuel exports outside their regions in 1976. For the Middle and Far East, the situation is reversed with manufactures being the predominant growth area.

Serie gialla :

Statistiche dell'insegnamento 1970-1977

ISBN 92-825-0794-7

200 pagine. Formato A4.
Edizione multilingue. Aprile 1979.

— Gli alunni e studenti e gli insegnanti nel sistema scolastico e universitario degli Stati membri. Oltre ad alcuni dati retrospettivi, le serie presentate in questo volume riguardano gli anni scolastici dal 1971/72 al 1976/77, venendo in tal modo ad attualizzare e a completare le tabelle presentate nell'edizione 1976.

— Le spese delle amministrazioni pubbliche per l'istruzione nel quadro scolastico e universitario. La ripetizione, nel 1977, dell'indagine realizzata nel 1976 in questo campo ha consentito di raccogliere e analizzare le spese pubbliche per l'istruzione nel 1974 e nel 1975. Va del resto osservato che l'ISCE ha predisposto, d'ora in poi, l'effettuazione annua di tale indagine.

Tutte le classificazioni in base al livello o al campo di studi corrispondono a quelle della Classificazione Internazionale Tipo dell'Istruzione (ISCED/CITE).

Prezzo :

BFR 600	LIT 17 000

Serie verde :

Produzione animale 1968-1977

ISBN 92-825-0830-7

94 pagine. Formato A4.
Edizione multilingue. Marzo 1979.

Statistica della produzione animale, elaborata in applicazione delle direttive del Consiglio relative alle indagini sulla produzione dei suini dal 1968 e dei bovini dal 1973, da eseguirsi a cura degli Stati membri. I dati sono completati, per le altre specie, con informazioni nazionali peraltro non perfettamente armonizzate.

Questa pubblicazione si articola nelle seguenti quattro sezioni :

- Consistenza del bestiame (categorie di animali, regioni) (1973-1978);
- Struttura degli allevamenti (bovini e suini) (1973, 1975, 1977);
- Produzione di carne (1968-1977);
- Bilancio d'approvvigionamento « carne » e « patrimonio zootecnico » (1976, 1977).

Prezzo :

Serie verde :

Bilanci d'approvvigionamento 1975-1977

ISBN 92-825-0721-1

299 pagine. Formato A4.
Edizione multilingue. Aprile 1979.

I dati più recenti sui bilanci d'approvvigionamento dei prodotti agricoli e alimentari e sui bilanci foraggeri (risorse).

- Bilanci d'approvvigionamento : 1975/76 e 1976/77 o 1976 e 1977.
- Bilanci foraggeri (risorse) : 1974/75 e 1975/76.

La pubblicazione comprende inoltre serie cronologiche a partire dal 1973 riguardanti l'autoapprovvigionamento e il consumo pro-capite.
